

Nail fungus serum pen

UK

Please read this instruction for use carefully and completely before using the Nilocin® Serum pen.

Nilocin® Serum pen is indicated for treatment of nailfungus on the finger- and toenails, as well as for nail discolorations and nail care.

Naifungus

Nail fungus, also called onychomycosis, is a common condition that begins as a white or yellow spot under the tip of finger- or toenails. As the fungal infection goes deeper, nail fungus may cause the nail to discolor, thicken and crumble at the edge. The fungus can further spread into the nail bed and the root of the nail. Further the fungus often spread from one nail to other nails.

Infected nails may separate from the nail bed, which can cause pain and result in an unpleasant odor. Nailfungus is more common in toenails than fingernails.

Nilocin®

The Nilocin® product comprises of a nail fungus treatment pen, and this instruction.

When the nilocin® serum is applied to the nail surface, it is immediately absorbed into the nail and works by removing conditions for fungal survival. Due to the molecule structure of the nailicin liquid, and the absorbance into the nails excavations and interspaces, the nail fungus is physically prevented from growth. Further a barrier between the fungus and the keratin is formed, and the proliferation of the fungus comes to a stop, as the fungal infection is suppressed. The keratin reproduction is stimulated.

The initial effect of the treatment will be seen within weeks, and the treatment is continued during the full regrowth period of the nail (6-8 months for finger nails and 8-12 months for toenails).

Nilocin® can be used for treatment of children as young as 8 years of age. Nilocin® is also safe for use during pregnancy and when breast-feeding.

Caution

Only for external use. Keep out of reach of children. Handle the product with care and in accordance with these instructions. Diabetic patients are recommended to consult their physician prior to usage.

- Do not use Nilocin® if you are known to be hypersensitive to any of the ingredients
- When applying the liquid, avoid contact with healthy skin surrounding the nail area

- The Nilocin® serum pen is specifically designed for direct topical administration to the nails, do not apply to other parts of the body including the eyes or mucous area.
- Do not exceed the number of recommended applications
- In the event of an allergic reaction or irritation, discontinue use

Should the serum accidentally come into the eyes, rinse with plenty of water.

How to use Nilocin®

- Remove the cap from the Nilocin® pen
- Gently apply the serum to the affected nails with the tip of the pen. Make sure to cover the entire surface of the nail and avoid contact with the surrounding healthy skin
- Allow the solution to fully penetrate the nail (1 minute)
- Repeat this procedure twice a day, i.e. in the morning and afternoon
- After 3-4 weeks, application can be reduced to once a day, until a new healthy nail has regrown.
- For preventative use, apply once a week

You should always remove nail varnish before application. The nail varnish can be re-applied after treatment.

Side effects

It is important to use the product as instructed. There are no known side effects.

Storage

Store between 2 to 30 degree Celsius and out of direct sunlight, in the original packaging and out of the reach of children.

Do not use after the expiry date or 12 month after removing the cap from the pen for the first time. Recap the pen firmly after use – press until you hear a click.

The product can be disposed in the household rubbish.
